

UNDERWATER SUPPORT TECHNOLOGIES**SIVA S-10
CLOSED CIRCUIT
APPARATUS FOR
SHALLOW WATER
OPERATIONS**

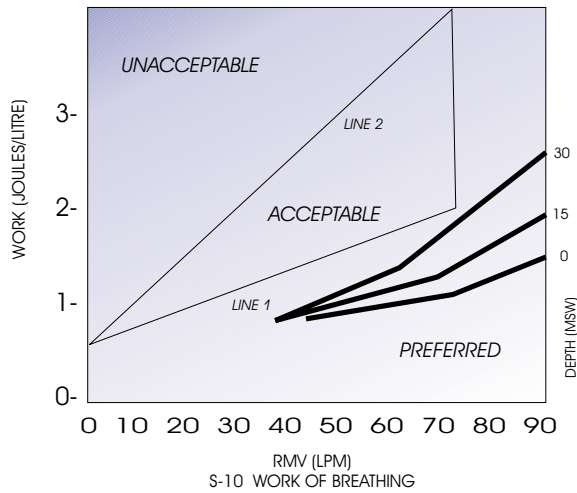

- Closed circuit 100% Oxygen.
- Proven from the Arctic to the Equator.
- Available in fully non-magnetic and acoustically safe configuration to strictest NATO specifications.
- Quality Control certified to ISO 9001.
- Cartridge style scrubber with 4 hr duration at 0°C.

**APPLICATIONS**

The SIVA S-10 is a self contained, chest mounted, 100% oxygen rebreathing apparatus developed specifically for Special Forces and shallow water Mine Counter Measures (MCM).

FEATURES

- Automatic injection of gas on demand.
- Field maintainable by divers - factory maintenance not required.
- Proven in environments from the Arctic to the Equator.
- Low Through Life Costs.
- Finger tight fittings - Yoke or DIN charging connections.
- Fits variety of face masks.
- Counterlung is impervious to UV radiation, rot, mildew and hydrocarbon fuels.
- High degree of parts interchangeability with other SIVA rebreather products.
- Can be upgraded to SIVA S-24 semi-closed mixed gas configuration.

Technical Data:

Depth:	0-8 metres	Closed circuit O ₂ (subject to local regulations).
	0-24 metres	(Optional SIVA S-24 upgrade).
Duration:	Max. 4 hour canister duration - dependent on flask configuration.	
Dimensions:	Length:	43 cm.
	Width:	32 cm.
	Depth:	20 cm.
Weight:	<13 kg. dry weight; neutral in seawater.	
Gas Control:	Automatic demand O ₂ injection in closed circuit mode.	

Accessories and Optional Equipment:

- SIVA S-24 Conversion Kit.
- Calibration instruments.
- Low Magnetic tool kit.
- High Impact transit case.
- Maintenance spares kit.
- 1.5 or 2.2 litre flask.
- Supplementary gas flask assembly for extended semi-closed operations.
- Buoyancy compensator (supports diver in head-up position on surface when fully inflated).

Please consult factory for more detailed technical data, options, accessories and custom features available to suit specific customer requirements.
