

A Standard Range of Proven Design for Situations Requiring Fully Retained Buoyancy. Seaflex fully enclosed lift bags are designed for reliable trouble free lift where added buoyancy is required, usually on or close to the surface. They are most often used for equipment float-outs, the laying of submarine pipes and as boost buoyancy where there is inadequate depth to float a vessel or piece of equipment. Only in exceptional circumstances are they suitable for salvage or lifting operations.

Due to the shape and stropping arrangements of Fully Enclosed (FE) Lift Bags they must be attached in such a way that they remain horizontal when under load, this can only be done by using multiple attachment points or spreader bars. They are ideal for assisting bottom towing of pipelines, removal of lock gates and similar operations. In these cases they can be inflated on the surface where correct horizontal attachment is easy.

BUOYANCY (KG)	DIMENSIONS (Length x Diameter)	DRY WEIGHT (KG)	PACKED SIZE (Length x Diameter)
1000	1.5 x 1.0	10	0.7 x 0.4
2500	1.5 x 1.5	23	0.9 x 0.6
5000	3.0 x 1.5	42	0.9 x 0.8
10000	3.0 x 2.1	80	1.0 x 1.0
